Projected P/E Ratio: Is the weighted harmonic average of projected P/E ratios of the companies invested in the portfolio, which ratios represent current market price per share divided by a company's estimated future earnings-per-share. Projected earnings are consensus analyst forecasts; actual P/E ratios may differ from projected P/E ratios. Price/Book Ratio: Is the price of a stock divided by its book value.

The S&P 500® Index is an unmanaged, capitalization weighted index that measures the performance of 500 large-capitalization stocks representing all major industries. The Russell 1000® Value Index measures the performance of the large-cap value segment of the U.S. equity universe. It includes those Russell 1000 companies with lower price-to-book ratios and lower expected growth values. An investment cannot be made directly in an index.

Fund holdings and sector allocations are subject to change at any time and are not recommendations to buy or sell any securities.

Mutual fund investing involves risk. Principal loss is possible. Investments in foreign securities involve greater volatility and political, economic and currency risks and differences in accounting methods. The risks are greater for investments in emerging markets. Additionally, the Funds are subject to sector emphasis risk meaning that companies in the same or related businesses may comprise a significant portion of a Fund's portfolio and adversely affect the value of the portfolio to a greater extent than if such business comprised a lesser portion of a portfolio. Investments in Initial Public Offerings (IPO) carry additional risk such as market and liquidity risk and can fluctuate considerably. When the Fund's asset base is small, the impact of IPOs on the Fund's performance could be magnified.
